WHY CHOOSE ULTIMA DISPLAYS?

CREATE GREATER BRAND AWARENESS TO STAND-OUT FROM THE CROWD.

Ultima Displays has been a market leader for over twenty years and is a designer and manufacturer of large format display and visual communication solutions. They are the only supplier to offer its network of resellers a complete range of products, from portable and foldable display stands to customised modular stands with printed graphics.

Ultima Displays has been a leading designer and manufacturer of portable solutions for large format visual communication for over twenty years. The company offers partners an unrivalled choice of display solutions; from portable roller banner and backwall displays to bespoke modular exhibition stands with printed graphics.

An extensive range and large storage capacity coupled with efficient logistics make Ultima Displays offer the most attractive on the market.

Support for customised projects

Ultima Displays offer support at every stage of a project, from technical advice to 3D stand design and printing of visuals. Coupled with our drive to constantly invest in product development, services and production equipment the company strives to deliver market leading solutions.

Effective and free sales tools are available such as our white label marketing materials (brochures, emailing, data sheets...) are available to partners to use as sales aids.

Dedicated team

The sales and customer service team operate from 8:30am to 5:30pm to provide customers with support and advice including product availability, production time-scales and ordering.

Competitive pricing

A choice of economical or premium products and solutions for display and exhibition purposes available at reasonable market prices.

Certified dealer network

Ultima Displays will only work with specialist dealers that work in the trade.

Made in Europe

Our products are designed and manufactured in our production facilities in Corby.

Customisable hardware and fully printed graphics

To complement the standard display products, Ultima Displays offer a professional production, print and finishing service for custom hardware and made-to-measure graphics.

Sustainable and reusable solutions

All our aluminium-framed solutions can be recycled and are designed to be reused, supporting unlimited reuse of graphics. Our sublimation, UV and latex printing processes are environmentally friendly and our fabric graphic media is fire retardant.

Engineering and 3D design

If a standard display doesn't meet requirements, Ultima Displays team of designers will work with you to create a tailor-made solution.

ULTIMA DISPLAYS CAPABILITIES

Ultima Displays has full production capability including printing and finishing services, fabrication facilities for modular solutions, coupled with a design office specialising in customised projects.

These services provide dealers with a full-service offering backed by the commitment to continually invest in market leading technology.

An extensive dye sublimation, latex and UV printing facility combined with high performance cutting-edge equipment enables Ultima Displays to support the network of local partners and dealers with outstanding quality and vibrant graphics. To help customers develop their visual communication business, all printing and finishing is carried out on site locally to ensure a fast turnaround.

We print 10,000 m² per day

From simple one-offs to multiple prints up to 3.2 metres wide; you can be assured of receiving the best printing times and excellent products from our continuous quality control and print colour profiling.

Dye sublimation printing

Dye-sub printing is a process whereby the ink penetrates the fabric fibres and is permanently bonded by a heat process. We use both direct and paper transfer to facilitate the technique. The end result is a high-definition print with an extremely intricate level of detail. Dye-sublimation printing does not affect the feel or quality of your fabric once printed. We use water-based inks that contain no toxic chemicals which enables us to dispose of them in a responsible, environmentally friendly way.

Latex and UV printing

Latex and UV printing produces vivid eye-catching colours and can be used on a variety of flexible and rigid substrates for indoor or outside applications, such as banners, signage, pop-up gazebos and inflatable tents.

A wide choice of printable substrates

We select medias to meet your requirements in terms of quality, colour rendition, vibrancy and cost, whilst ensuring our range also incorporates the growing need for environmentally sound solutions too. A choice of fully tested textiles and PVC medias will guarantee vibrant colour graphics for your hardware for an optimal and long-lasting result.

Expert Finishers

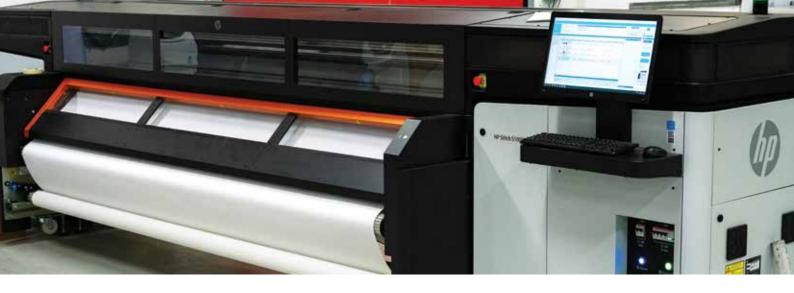

We have a highly experienced sewing and finishing team for standard and made-to-measure products in our manufacturing facilities. We bring a variety of standard and unique custom designs to life, many with complex shapes and finishes. .

All our products are tested before they leave our workshops to ensure customer satisfaction; from a fast-track finish on a flag order, exhibition stands or promotional items such as cushions or textile goods...our finishers can handle it all!

Accelerated artwork processing

Our artwork file processing process is fast and simplified thanks to an automated control solution. Once uploaded, the system automatically generates a confirmation e-mail in response to your order and you will receive a follow up email to sign off a proof of your artwork within two hours. If for whatever reason your artwork does not pass the pre-flight printing check, you will receive instructions on how to correct it.

Modular solutions design and fabrication

Our CAD experts can advise and produce custom-build projects, from exhibition stands to dynamic 3D shapes or unique signage. Everything is manufactured on site in our facilities and we use a range of aluminium extrusions which join using simple components to create adaptable and variable structures. Our systems are designed to be modular which means they can be reused so they are more beneficial to the environment.

3D Conception

3D designs created by our CAD experts. Our design team can assist you at all stages of your project to ensure we meet your specific brief. From advice on design and functionality requirements, to quotation and 3D renders we work with you right to the build and completion of the project and we will do this all within the agreed budget. From the very first step of the process, to the finished product we work with you to deliver your unique design.

To help us respond to you as quickly as possible, we will require the following information:

01 The location :

Dimensions of the space? And how many open sides will your design have?

02 The design:

What graphic media substrate will you require; fabric, rigid or flexible panels?

Do you need a storage area for materials?

What lighting requirements do you have?

Will you need to communicate your branding at a higher height using signage, an extension or storage room extension?

Would you like to compliment your build with a custom printed graphic floor covering?

03 The use:

What are your exhibition dates?

How often will you be using your structure?

Does you custom build need to be scalable in shape and size?

How will your custom structure be being transported?

04 The budget:

What is the budget that has been allocated for the production of the stand?

Made in Europe

We manufacture standard or custom modular solutions, either pre-assembled or in kit form, in our on-site manufacturing facilities, and extensive production capacities are available throughout the Ultima Displays group including thermoforming and the cutting, forming and assembly of aluminium extrusion for tension-fit fabric wall or free-standing displays and stands.

Quality processes

We have an experienced and dedicated team that quality control checks each product before despatch.

Innovation through creativity and continuous improvement

Ultima Displays prides itself on its ongoing investment in product R&D. Technical and environmental research is carried out continuously to ensure our range of visual solutions are up to date, suitable for current market trends and expectations, and that they will provide our customers with continued added value.

A SOLUTION FOR EVERY REQUIREMENT

DISPLAY SIGNS

Professional wall, floor and suspended signage solutions

DISPLAY BANNERS

Portable display options, ideal for temporary deployment

DISPLAY BACKWALLS

Large format graphic backdrops which are ideal for conferences, promotional activities and events

04

DISPLAY STANDS

Complete exhibition stand solutions, incorporating hanging structures, modular stands, towers and customised stands

05

FLAG BANNERS

Attract attention at a distance through movement with eye-catching flag solutions

06

TENTS

Perfect outdoor temporary shelters, outdoor pop-up shops and market stalls.

07

COUNTERS

Adaptable and portable temporary counters for promotional, display and exhibition applications

08

BARRIERS

Convenient and easy barrier systems, to create temporary areas, manage queues and control crowds

09

ANCILLARIES

Accessories designed to increase the functionality of a chosen product range

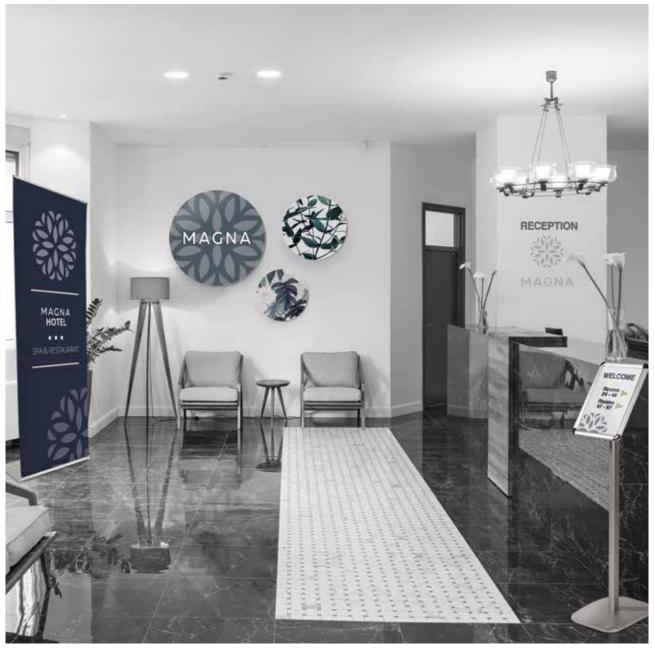

DISPLAY SIGNS

Ultima Displays delivers a comprehensive range of professional display signage solutions for a variety of uses.

From navigational signs to advertising, information, decorative and display needs.

Display signage solutions are versatile, reusable, durable, and reliable, ensuring investment in hardware is maximised, whilst allowing the flexibility to update marketing messages frequently.

With a wide choice of installation options such as wall, suspended or free-standing, as well as eye-catching illuminated lightbox versions, Ultima Displays offers one of the most comprehensive ranges on the market.

Wedge

Wedge is a weighted clamping banner base range that comes in pairs and is designed to hold a variety of rigid substrates for indoor or temporary outdoor usage. Available in four sizes from 300mm up to 1000mm Wedge can be used in tandem with a second pair of bases to create larger displays.

Animate your branding with V· ΛΟΤΙΟΛ™

the v

This new technology, commonly known as digital signage, is integrated into an existing solution: the Vector 75 mm frame. The digital signage combines printed textiles (fixed by PVC rods) with LED animations: it is an intermediate solution between the digital screen and the fixed textile frame. The solution is characterised by its great simplicity of assembly and message renewal. A simple USB stick is enough to make the visuals dynamic and offer a new dimension to brand messaging.

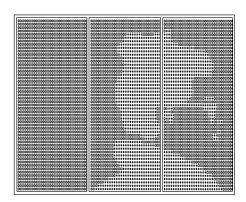

To highlight a logo, a product or a message the principle is very simple. Choose your visual for animation. Our DTP team will program the animation and provide it to you on a USB stick.

Offer a unique sensory experience for retail, window displays or on a trade show stand.

- Eliminate the need for an aperture in the substrate
- Suitable for 2-10mm thick substrates in rail or screw options
- Distance from wall or ceiling 18.5mm approx.

Compact Variable Cable Fixing

- 180° variable angle fixing
- Screw fixing
- Cannot be used with PO110 cable kit, use PO109

Adjustable Fixing Cable

- Supplied with rail fixings
- Can be fixed wall-to-wall, floor to ceiling, direct to wall - extra components required

8 Insert for Screw Fixing

- Suitable for PO109 Strata Cable Kits and Stand-off components

Screw mounting PO116

DISPLAY BANNERS

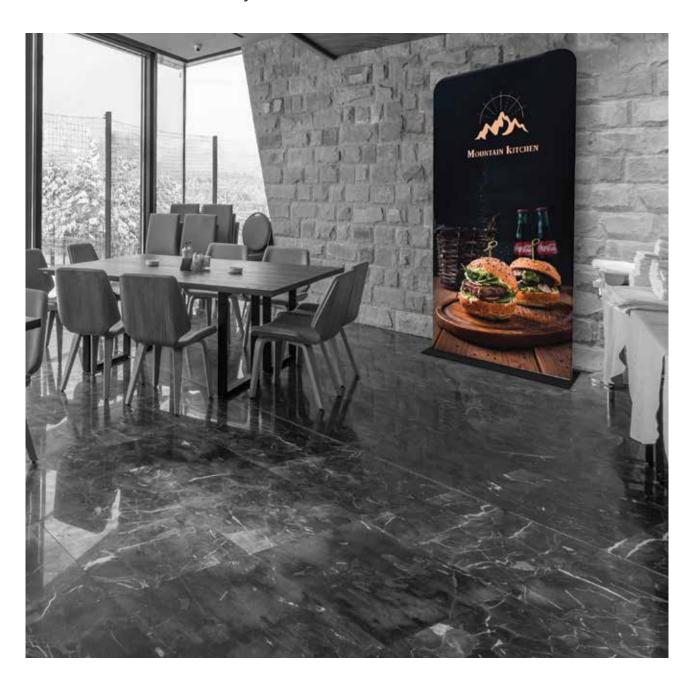

Portable display options, ideal for temporary deployment

Ultima Displays unique range of Display Banners are highly portable, quick to deploy and suitable for a broad range of applications.

Choose from the economy range through to premium options for use indoors or select specifically designed solutions for outdoor applications. Alternatively the Fabric Systems are a premium display solution, featuring aluminium tubing, with double-sided high-quality dye sublimated fabric graphics. Easy to deploy with tool-free assembly.

Affordable by nature, the Roller Banner range delivers a convenient, tool-free solution, with retractable graphics that deploy in seconds. Choose from an indoor or outdoor model that best suits you application, with single or double-sided graphic options.

Lastly Ultima Displays Tension Banners are constructed of lightweight materials and offer the best value for money.

Roller Banners Economy

Wasp

The Wasp roller banner is an entry level product, ideal for short-term events or displays, where cost is a primary consideration. Despite its affordable price, Wasp is made to exacting quality standards and carries a full manufacturer's warranty, so you can be confident it will perform as expected.

Roller Banners Premium

Merlin

Use outdoors

Merlin is a sleek and elegant premium roller banner with an interchangeable graphic cassette which extends the life of the banner as graphics are quick and easy to change. The graphic cartridge is housed independently from the main base unit so it is simple to remove and replace with new graphics and old graphics can also be reused, just by swapping the cassette. A great value for money solution if the message or marketing campaign changes regularly. The Merlin roller banner comes with our manufacturer's quality warranty, giving you peace of mind that it will perform every time.

Animate your branding with V· ΛΟΤΙΟΛ™

This new technology, commonly known as digital signage, is integrated into an existing solution: the Vector 75 mm frame. The digital signage combines printed textiles (fixed by PVC rods) with LED animations: it is an intermediate solution between the digital screen and the fixed textile frame. The solution is characterised by its great simplicity of assembly and message renewal. A simple USB stick is enough to make the visuals dynamic and offer a new dimension to brand messaging.

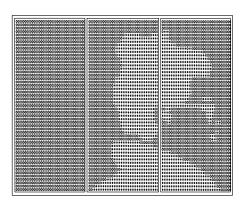

To highlight a logo, a product or a message the principle is very simple. Choose your visual for animation. Our DTP team will program the animation and provide it to you on a USB stick.

Offer a unique sensory experience for retail, window displays or on a trade show stand.

DISPLAY BACKWALLS

Display Backwalls create a dramatic backdrop to events, presentations, product demonstrations, pop-up shops or window displays. They are also ideal for smaller spaces, or as large static advertising boards in public spaces such as museums, reception areas, public transportation hubs and other large spaces. Backwalls from Ultima Displays are available in several system configurations, depending on the application, with each offering a different method of construction, illumination and use.

Segmented Frame Walls are fully configurable, professional grade backwalls, where flexibility, ease of storage, reusing, portability and assembly are important, Ultima Displays Formulate and Modulate™ fabric tube systems are perfect partners. The Pop-up Wall systems are constructed from lightweight aluminium scissor mechanisms, that are easy to transport, assemble and store, and are ideal for small exhibitions or events, as well as static displays. For a simple backdrop, the Pegasus tension walls offer a cost effective, easy solution to meet those needs. Configurable in both height and width, the tension wall is quick to assemble and makes an ideal backdrop to temporary or short-term presentations.

Embrace+

Bring drama and impact with large illuminated backwalls, U-shapes or seamless 90° corner walls using Embrace+; the premium portable LED tool-free system. Comes in a selection of sizes and is linkable so Embrace+ can fit and brighten-up any size event.

DISPLAY STANDS

Display stands are the perfect solution for an array of different applications. From exhibitions, conferences, events, retail event zones to window displays and product showrooms; their uses are unlimited. The perfect stand will showcase and increase the opportunity to interact with existing and potential customers by creating engaging, and innovative brand promotion and messaging.

Ultima Displays range of products include hanging structures to attract interest from a distance, modular stand components and display towers that can be combined to create truly contemporary and captivating exhibition spaces. The collective modular systems; Vector, Linear, Modulate™ and Formulate, are all designed to work in unison, to deliver a re-usable and re-configured exhibition stand. In addition, stands from the modular range also all feature replaceable graphics, thus protecting the investment in hardware, whilst still being renewable by updating branding or marketing messages.

Creating an effective display stand that drives results is extremely straightforward with this collection of pre-configured solutions. Simply select a design for inspiration whilst considering floor size and parameters of price-point. For a more unique stand construction, the modular range can also be customised - incorporate precise requirements with all the benefits that modular exhibition systems offer for complete creative innovation.

Vector

One of the simplest and most versatile communication solutions on the market. Vector is an aluminium frame system with a stretched fabric graphic that adapts to any environment. With its 8 different profiles, all applications are possible: suspended, wall-mounted, self-supporting, double-sided or illuminated.

Modulate™

Modulate™ is the result of the fusion of two original concepts: Formulate and Vector. The range is composed of 13 sets made of aluminium tube, equipped with the patented magnet system: MagLink. It has been designed to be at the service of the user by giving the choice of hundreds of possible configurations, in all communication fields.

Formulate

An original concept that combines the spatial control of tubular structures with the infinite possibilities of fabric printing. It is based on the shaping of 30mm and 50mm diameter aluminium tubes to create structures with innovative shapes that enhance brand messaging.

Linear

POS communication and stand solution which enhances flexible and rigid PVC supports. A visible or invisible structure, stands can be configured according to space available and desired design .

Arena

A concept of a tubular aluminium stage structure that is both extremely strong and light. The different sections can be assembled according to the space and can be covered with fabric or eyeletted bungeed vinyl graphics.

Exhibition communication

Why exhibit at a trade show?

The trade show remains the preferred medium for companies seeking to increase their reputation and promote their image.

The benefits of a trade show are numerous and very attractive. It allows several actions to be carried out in a relatively short period of time:

- Prospecting
- Market watch
- Presentation of new products
- Building customer loyalty
- Business networking

The centrepiece: your stand

A stand that reflects your image, yes, but not at any price. The success of a trade show also depends on its attractiveness at the best quality/price ratio. To be sure of making the right choice, it is essential to list your requirements and answer the following questions:

1. Location :

How much space? How many open sides?

2. The design:

Which media: textile, rigid, flexible panels? Need to communicate in height: sign, extension or extension of storage room? Do you need a storeroom to store equipment? What kind of lighting?

3. Use:

How often?

Will it need to be scalable in shape and size? What means of transport do you have? Can the sta be reused in another environment: showroom layout, decoration, etc.?

4. The budget:

What is the budget for the stand?

Over how many shows will it pay for itself?

The keys to success

To have a successful trade fair, it is essential to:

- Set 3 to 5 objectives that will guide the marketing strategy of the event
- Ensure maximum visual impact with a quality stand that will enhance the company's image (openings, suspended communication, graphics, materials, etc.)
- Implement effective communication and promotion: before, during and after the event (emailing, invitation, social networks, stand promotion...)

Why choose a modular a modular stand?

- Lightweight and compact
- Reconfigurable
- Quick payback
- Durable
- Easy to assemble
- Standard or custom made
- · Unlimited message renewal
- Ergonomic

Standard Stands Vector

Vector or the art of communication

Whether wall mounted, free-standing or backlit, the diverse range of Vector aluminium profiles provides a solution for every need and every budget.

They offer optimal visual impact and original designs that can be adapted to any event: showrooms, points of sale, exhibitions, museums and many others.

Anodised or lacquered aluminium profiles

The Vector range includes 7 aluminium profile models that are perfect for all applications. Let our overview table guide you and make your choice easily.

Code	VECTOR	Wall mounted	Free- standing	Illuminated	Double-sid- ed	Premium range	Various colours

^{*} Available in standard modules for stand application

Vector modules An ultra-compact solution

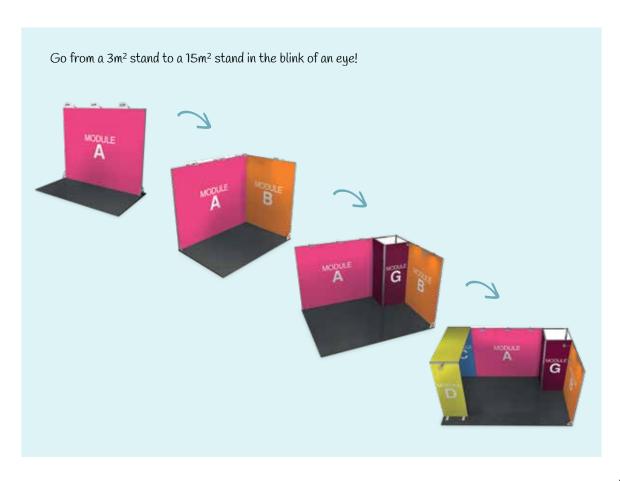

From free-standing video walls to exhibition stands, **the Vector range offers a versatile and adaptable solution** for all your events. The Vector frame system with stretched fabric covering is one of the simplest communication solutions on the market, particularly in a stand environment. Scalable, reconfigurable, ultra-portable: **go from a 9 to a 15 m² stand with ease**. Easily create stands of all sizes and shapes and accessorise them with spotlights, counters, document holders, etc. Find the right solution for your project:

Need a compact solution for better portability and optimised storage?

Choose the Vector modules:

- 50 mm aluminium profiles
- Different modules: walls, arches, LEDs, storage...
- · Packaged in numbered sections of 1250 mm,
- Delivered in a cardboard box with assembly instructions, accompanied by the visual of your choice
- In stock all year round
- Each module is already perforated on 4 sides and equipped with the necessary screws: easily assemble different modules together, one Allen key is enough.
- **Reconfigurable and reusable:** store the stand at home in a small box (1350 x 400 x 300 mm)
- · Excellent return on investment.

Vector modules u.motion™

Need a compact solution for better portability and optimised storage for all your shows? Choose Vector modules. The Vector range offers a versatile and adaptable solution for all your events. The Vector frame system with optional stretched fabric graphics is scalable, reconfigurable and ultra portable thanks to its range of standard Modules available in several shapes and sizes. u.motion™ is the digital signage technology that fits into a 75mm Vector profile. The rollable LED panel is simple to install, and easy to transport or store. Two standard modules available.

Standard Stands Modulate™

The Best Way To Attract Attention

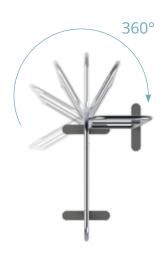

Modulate™ is the result of the fusion of two original concepts that have proven successful in the exhibition and retail world.

Formulate tubular solutions with the modularity of Vector frames.

Modulate[™] is a set of 13 frames made from aluminium tubes and covered with a printed textile cover. These frames can be easily connected to each other by means of powerful magnets placed inside each structure.

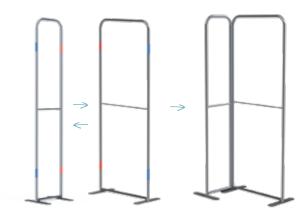

Based on this simple magnetic principle, it is possible to combine the different Modulate™ frames to create configurations for all communication areas: at the point of sale, at trade fairs, in exhibition areas, in shopping centres or simply within companies themselves.

MagLink connector, simple, fast and reconfigurable

Thanks to the exclusive MagLink magnetic system integrated into the structure, you can connect the frames to each other simply by bringing them together.

Optional 400 mm extension to change the height of the structures

MagLink connectors 360° in each post

Modulate™ carry bag with dedicated slots for feet and graphics

Intuitive marking on each section for easy assembly

Self-locking system with elastic posts and push-fit button

Rounded or straight corners with the reference MOD-SQ-ANGLE

2 Stabilising feet with Twist & Lock system, supplied with each frame

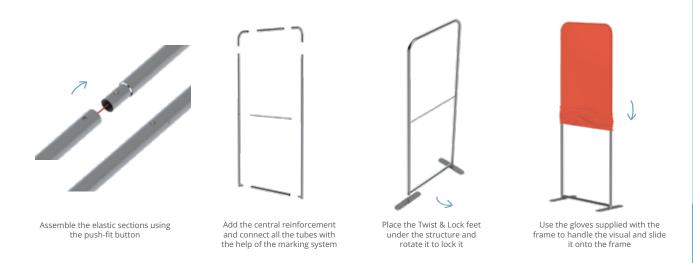

Central reinforcement bar (18 mm diameter)

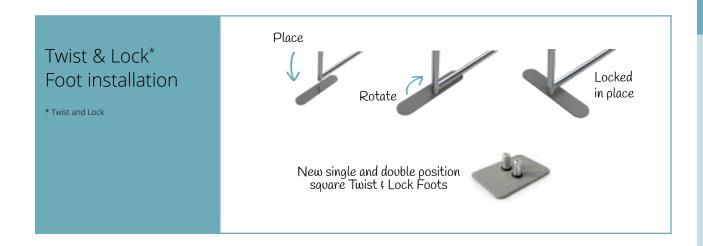

Double-sided custom printed fabric graphic that zips closed

Intuitive assembly without tools

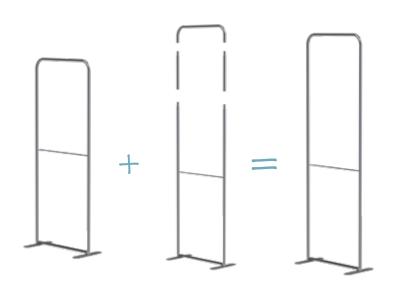

Modulate™ structures are easy to assemble without tools. Each section is marked with numbers and colours and connected with push buttons. Once the structure is assembled, the Twist & Lock feet will rotate a quarter of a turn until they lock into a perfectly stable self-supporting frame. Finally pull-on the printed fabric graphic which perfectly fits to the contour of the frame.

Structures with unique technological innovations!

To add versatility to Modulate™ structures, a 400 mm tubular extension can be added. With this extension, which is easily placed between two sections, you can use the same frame with two different heights.

Modulate[™] Straight

Modulate™ is an innovative double-sided display system that consists of a set of lightweight aluminium frames covered with a custom printed tension fabric graphic. Frames connect together using powerful magnets encased inside each element and can be joined at any angle to create shaped displays or backwalls. Frames are completed with tension-fit fabric graphic pulls over the frame and zips at the base. Frames are available in various widths and two height options. Each frame is supplied with two stabilising feet which can be used if required for extra stability. The Modulate™ Straight frames can be used on their own or combined with other frames to create hundreds of configurations.

Custom Stands Formulate

When structures give way to original and innovative forms

A simple, intuitive and easy to set up offer in all circumstances. Formulate solutions are available in tension backwalls from 3 to 9m wide, columns, arches and custom-made.

Formulate's primary objective is to provide you with a design solution where traditional wooden or aluminium structures reveal their limits. Give free rein to your creativity: the aluminium tubes can be bent and curved to suit your imagination.

Easy to assemble

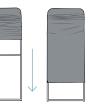

Formulate structures are made from 30 and 50 mm diameter anodised aluminium tubes. Like a construction set, each section has a number and colour coding system for quick assembly and deployment.

360° Visible communication

Formulate structures stand out thanks to vibrant custom-printed zip-close fabric graphics. Seamless, double-sided brand communication for maximum message impact.

Fabric graphics pull onto structures and zip close - fitting the contours perfectly.

Multi-use structures

Formulate structures offer many design solutions and are suitable for a variety of uses.

Standard Stands Linear

Linear assembly principles

Assembly of a post and a crossbar by locking with an Allen key.

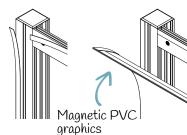

Linear profiles can be connected using a connector system already integrated into the profile.

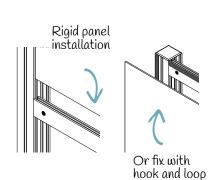

Graphic options for dressing structures

Whatever media you wish to use, you can choose to dress the structure entirely or partially.

PVC (1mm) graphics require the use of an adhesive magnetic tape which will be positioned on the back of the graphic with a metal strip that adheres to the structure.

Rigid panel graphics (5mm) allow the panel to fit directly into the channel of the post. If you wish to cover the entire structure, male and female hook and loop fasteners are used on the back and on the structure.

Linear, versatility for profiles and print media

Linear is a modular solution consisting of several aluminium sections and designed to provide an alternative to structures with fabric covering.

The construction of channelled posts and cross beams allows the structures to be fitted with flexible PVC or rigid panel graphics.

Channelled profiles and crosspieces in anodised aluminium:

50mm 8 connections

LN616 - Square post

50mm 8 connections

LN607 - Square post 75mm 8 connections

LN605 - Beam 45mm

LN619 - Oval Beam 50mm

Linear Modules

The Linear offer is available in 5 modules that can be combined to create different configurations.

Posts are cut into 1.25m sections, making them easy to transport and store. They are ready to be used with custom printed graphics.

Custom Stands Arena

Arena structure

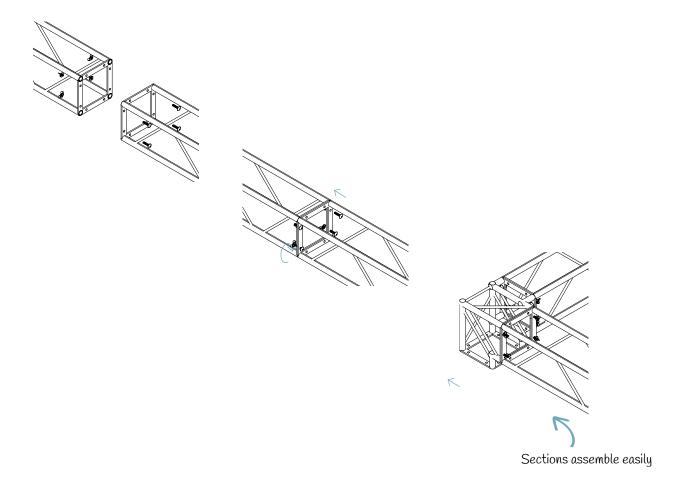

These 25mm diameter aluminium tubes have been assembled and welded into sections of various shapes and sizes to form the basis of an imposing and solid architecture.

A wide range of sections is available to make our proposal the most compatible with your project.

No less than 17 components, including 7 lengths of straight sections, to create the right structure for you and your chosen mode of transport.

Simple, tool-free assembly

Simply assembly - sections use bolts and nuts supplied and no tools are required. Double-sided graphics affix by eyelet with bungee cord. Create maximum brand visibility with up to 6m sections without reinforcement.

FLAG BANNERS

Draw attention to branding, products, services, or business premises with custom printed flags. Instantly noticeable due to their height, shape, and movement, Ultima Displays all-fibre flag poles are durable and flexible, easy to assemble and quick to deploy, making them an extremely effective means of advertising.

Available as single or double-sided options and printed using hardy, UV resistant media, flag graphics can be utilised indoors or outside with standard or custom flag shapes.

Choose from a range of free-standing, post or wall mounted, mobile and specialist hardware applications for locations such as car forecourts, festivals, and beach flags.

Alternatively, deploy taller or multiple flags to increase visibility and attention to branding. Ultima Displays all-fibre flag poles are reusable with interchangeable graphics for greater return on investment. To protect this investment, it is recommended that flags be kept securely in place by selecting an appropriate base suitable for the desired application and location from the specifically designed range.

Free-standing Zoom+

Zoom+ Quill / Feather Flag

Popular and versatile, lightweight flexible flag system, with black finish all fibre poles. Choose Feather or Quill shaped graphics. Ideal for advertising and used for all types of indoor and outdoor displays. Optional custom printed flag graphics are available in a range of sizes from small to extra-large and, with a choice of single or double-sided options (small, medium, and large). The eye-catching shape creates movement in the wind and is a great for attracting attention.

Zoom+ Edge Flag

Popular and versatile, lightweight rectangular shaped flag system with black finish all-fibre poles. Ideal for all types of indoor and outdoor displays. Quick and easy to deploy and can withstand winds of approximately 13 -18m/h (21-29km/h). Optional custom printed flag graphic available in single and double-sided options (small, medium, and large), and all flag graphics have a printed pole pocket. The flag moves naturally in breezy/windy conditions and is ideal for attracting attention on car forecourts, at exhibitions and events, or outside a building or premises.

Post Mounted

Mistral

The Mistral is a fixed outdoor flag system designed for mounting to lampposts or building exteriors and is perfect for advertising or promoting a brand or event. The mechanism attaches directly to a pole, posts, or wall and can be moved to accommodate varying graphic heights. An eye-catching solution that can also be used for information and wayfinding. This flag is especially effective when repeated over a series of posts.

Tents

Take advantage of outdoor events with a temporary structure and create additional marketing opportunities. Offer customers protection and shelter from the weather by choosing custom-printed tents, that also provide an attractive brand marketing solution. Conventional pop-up tents and gazebos are fantastic provisional outdoor or indoor structures which provide a unique way to advertise in a vibrant impactful manner with fully printed canopies and walls.

Constructed from robust steel or aluminium in a variety of sizes that are easy to transport, assemble, deploy and pack away, pop-up tents are ideal for short term events, fairs and exhibitions.

For a more unique and unconventional structure, choose the Bora Inflatable Tent. Simple to inflate for rapid deployment with an appealing eye-catching shape, the Bora, like pop-up tents, also offers optional printed canopies and walls. Customisable areas make highly effective brand messaging, ensuring maximum impact at events. As with all custom-printed graphics, they can easily be replaced, meaning you are also able to reuse your hardware, improving your return on investment.

Pop-Up Tent Pop-Up Tent

Zoom Tent Eco

The Zoom Tent Eco is the most cost-effective gazebo in our range. Quick and easy to deploy, the 3x3m tent can easily accommodate a 2.4m wide table making it a great solution for street markets, golf days or sporting events. Made from steel with a white powder coated finish, the frame easily shelters up to five people and folds completely into a portable wheeled carry bag. Custom fully printed canopy and walling available as an optional extra.

Bora Tent

The Bora Inflatable Tent is a sturdy and attractive option for outdoor displays. Create shade and shelter for a registration desk, refreshment area or meeting point that fully shows off your brand. As one of the largest products in the range, there is plenty of print area on the canopy and backwalls (optional extra) for brand messaging. The backwalls zip in, so can be changed for a different message from the canopy if you wish. The Bora Tent uses trapped air technology: silent and free-standing once inflated.

COUNTERS

Temporary counters add a professional touch to any exhibition, event, or retail environment. They provide a useful area for display or presentation space and, the ability to add a graphic, creates additional marketing opportunities as well as offering a convenient storage facility.

Ultima Displays counters are available in a range of price points and shapes, depending on requirements. Add impact to a welcome desk or a reception area in a public space with an illuminated counter or choose an outdoor option to promote a product or service at an open-air event. Counters are the perfect partner for a promotional display or event to complement a backdrop or add focus to an area and are the ideal companions for any marketing campaign.

Promotional Non-illuminated

A convenient lightweight pop-up counter that offers a substantial area to welcome guests yet packs down for easy transportation in a reinforced D-shaped wheeled trolley case. The counter comes with shelves for storage and a beech-coloured counter-top. Often used for exhibitions, in supermarkets as a demonstration unit and for events.

Modulate™ Counter

Modulate™ Counter consists of an innovative aluminium tubular frame, counter-top, and printed tension fabric graphic. Powerful magnets encased inside the frame enables two or more counters to connect using simple magnetic principles. The counter can be used on its own or combined to make a long reception or bar area. Modulate™ Counter can be deployed in minutes, thanks to the tool-less construction. The printed tension fabric graphic will either sit on or under the counter-top to suit the application.

Basics Curved Counter

With a Double-D shape counter-top, the Basic Curved Counter delivers a functional and stylish look which is perfect to use for a reception desk or meeting point. The Counter is made from a rollable Corex tambour wrap to create the curved shape which push-fits into the thermoformed counter-top and base. A graphic can also be applied to the curved base to promote a message or brand. There is an opening for storage at the rear of the unit.

Promotional Illuminated

Embrace+ LED Counter

The Embrace+ Backlit Counter is a double-sided portable unit that can be quickly deployed and will add impact to any event or exhibition stand. The counter comprises of four main components: the collapsible white aluminium powder coated frame, the LED curtain lights, the counter-top and a set of optional SEG tension fabric graphics. The backlit LED curtain lights provide consistent illumination with no black spots and are powerful enough to illuminate both sides of the frame, without the need to add an additional LED curtain.

Illumigo™ Counter

This versatile and quick to set-up double-sided counter lightbox is a great all-rounder not only at events but in retail environments from shopping centres to pop-up shops. Part of the Illumigo™ range, the Illumigo™ Counter is easy to assemble with a two-part counter-top that secures using a pair of twist out top locators and locking screws. Building the unit is intuitive and tool-free as all the parts are numbered and simply slot together. Two optional graphics complete the look to create an impactful counter ideal for attracting attention in retail, event or exhibition

BARRIERS

Barrier systems help manage segmentation of an area, improve queue management, and help with crowd control. For area segmentation, café barriers can be used to make an attractive, professional and functional barrier, creating a temporary space that can be easily reconfigured to suit your needs.

Café barriers are easy to store, assemble, deploy and move to suit your requirements. They are available in economy and premium solutions, depending on your application and budget and are suitable for indoor or outdoor use.

Queue management systems can be used to control queues, providing structured and manageable lanes to help marshal customers and are also suitable for indoor or outdoor use.

Economy Café

A cost-effective way of defining areas outside restaurants, bars, shopping centre and coffee shops. A complete Café Barrier system requires two posts and bases. To secure the graphic there are two options; dependent on budget and where the system is being deployed. If the Café Barrier is exposed to strong winds, we recommend a two-rail option ensuring the graphic is secured top and bottom to each post and base. If winds are not an issue but the budget is tight, then we suggest a single rail with two spring clips securing the bottom of the graphic. Rails are available in 1m, 1.5m and 2m sizes so it is quick and easy to calculate the number of café barriers required to define your space. To connect multiple barriers, add your choice of rails/spring clips plus one additional pole and base. All hardware components are finished in black. We can print without graphics on PVC virul or recorded ecomodia. vibrant graphics on PVC vinyl or recycled eco media.

Premium

Deluxe Café

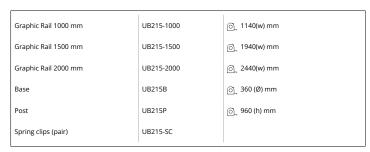

With premium look and feel the modular Café Barrier system defines areas outside restaurants, bars, coffee shops, shopping centre and club houses. A complete Café Barrier system requires two posts and bases. To secure the graphic, there are two options; dependent on requirements and where the system is being deployed. If the Café Barrier is exposed to strong winds, we recommend a two-rail option ensuring the graphic is secured top and bottom to each post and base. If winds are not an issue and you want movement in the graphic, chose a single rail with two spring clips securing the bottom of the graphic. Rails are available in 1m, 1.5m and 2m sizes so it is quick and easy to calculate the number of café barriers required to define your space. To connect multiple barriers, add your choice of rails/spring clips plus one additional pole and base. All hardware components are finished in a premium chrome effect. We can print vibrant graphics on PVC vinyl or recycled eco media.
